Lead and Copper Participant Survey

Thank you for your interest in participating with lead and copper monitoring. To maintain complete records and estimate your home's risk factor, we ask that you complete this survey.

Customer Name: _____

Phone Number: () _____

Physical address: _____

Street Number and Street Name

Mailing Address: _____

Street

City, State

Zip

Year of plumbing: _____

Often same as the year the home was built; if unknown, write: UNKNOWN

Is a permanent water filter installed in your home? Yes No

Is a water softener installed in your home? Yes No

What type of plumbing material is used within the home? Plumbing material can be verified by inspecting the lines from the water meter, leading into your water heater, and connecting to faucets.

Check all that apply:

- Lead (dull, dark gray, similar to pencil lead. Easily scratched with hard object, shiny when scratched)
- Copper (copper color, green tarnish)
- Galvanized Iron/Steel (Black, some reddish-brown rust, hard to scratch)
- Plastic

After the free test kit is delivered, it is important that the sample be collected first thing in the morning before any other water is run. The ideal amount of time for water to have settled within the pipes is 8-18 hours. This allows for analyzing what is happening to the water and plumbing materials after the water was inactive overnight in the lines.

Improper sample collection will invalidate the result.
